

# FABER® TAILPIECE WRENCH

**Tired of damaged tailpiece studs or  
- even worse – your precious guitar top?**

The **Faber®** Tailpiece Wrench has a recessed screwdriver tip inside a protective socket that fits snugly around the head of every tailpiece stud (1/2" diameter). The smooth wall of the socket keeps the wrench dead center on the post. It can't slip, so you will not damage the head of the plated stud OR, heaven forbid, your guitar's beautiful top! The blade is large, and the perfect thickness for the stud slot, unlike even a very large conventional screwdriver, whose blade is still not the correct size.

Precision designed and manufactured in Germany to work perfectly on Faber's® *Tone-Lock™* "Pro Sustainer System" Studs, as well as all stock 1/2" diameter and TonePros® Locking Studs!
