

FABER® "TONE-LOCK" PRO SUSTAINER SYSTEM

- Locking Tailpiece Studs & Spacers -
- The clearly SUPERIOR alternative! -

- ✓ The pat. pend. **Faber® TONE-LOCK** system just exchanges the tailpiece studs with STEEL studs. Modification is not required, and external appearance remains unchanged.
- ✓ Sound quality will be dramatically improved by the revolutionary tailpiece locking system.
- ✓ Transmission of string vibration to the body improves substantially due to the tailpiece being locked into the studs and the elimination of any gaps, due to the steel spacer rings.
- ✓ Sustain, tone, attack, etc. are all improved. Other locking solutions DO NOT compare to our "no gap," solid contact from top of stud to body!
- ✓ In addition, because the tailpiece is locked in place, it is very convenient when changing strings.

- ✓ There are **three** sizes of spacer rings, **2.5/4/5.5mm**, for the height adjustment of the tailpiece.
- ✓ The **Faber® TONE-LOCK** Kit comes with **two** studs and **six (three pairs)** spacer rings.
- ✓ Available with **metric (mm)** or **imperial (inch)** threads, according to the guitar's tailpiece inserts.
- ✓ Studs/spacers are nickel plated steel and available in glossy polished or aged.
- ✓ The spacer rings are also available in natural aluminum.

Before, mmh ? ...

Step1 -

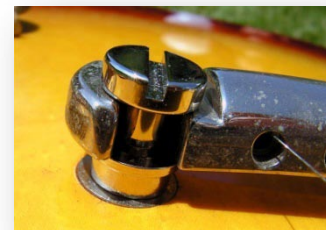

Step2 -

Step3 -

... finished and now totally fixed !

Wow !! -
